Subject: Application of python developer position

Dear Mr. Sundar,

With great pleasure, I am sending in my application for Google's python developer position, which was posted on LinkedIn. Having a strong foundation in software development and a strong interest in python flask framework to create scabble websites. I'm thrilled about the chance to contribute to Google's creative projects and team-oriented work atmosphere.

I have 5-year experience in python developer. I used the Flask framework to create a website for the MRU (most recently used) simulator in my prior position at Microsoft. For this project, features that imitate MRU caching methods and their performance in different scenarios had to be designed and implemented. I improved my Python coding abilities and had a thorough understanding of using the Flask framework for web development from this experience.

I appreciate your consideration of my application. I'm excited to talk more about how my qualifications and experiences meet the needs of your group and how I can support Google's goals.

Warm regards,

Kalpesh
